The sun, at the center of solar system, and the planets around it are among the wonders of creation. Venus is the second planet from the sun which is sometimes called Earth's twin (دوقلو). This is because their sizes and weights (وزن) are alike. You can see it without a telescope and it's the second brightest (روشن ترین) object in the night sky after the moon. Thick (ضخیم) yellow clouds are always around Venus. However, Venus and Earth are also different. Venus doesn't have life and it doesn't have water like Earth. It takes two hundred and twenty four days to orbit the sun, for Earth it is three hundred and sixty-five days. Venus has no moons. It is a dry, hot planet. Strong winds blow all the time. The Romans named it Venus for their goddess of love and beauty.
